

***Communities in Motion*, the valley's regional long-range transportation plan, looks 25 years into the future to plan for transportation needs.**

Why is a transportation plan developed?

The plan helps ensure our transportation system is ready for the future. It helps prioritize projects and is a requirement for receiving federal highway funds.

What does this mean to me?

The plan will affect how and where transportation funds are spent, which will affect you and your community for many years to come.

There isn't enough money to pay for everything that is planned. We need your input to help prioritize how money should be spent.

Who is "COMPASS" and what does it do?

COMPASS is an association of local governments and is the agency responsible for developing the long-range transportation plan.
